

# Outdoor Learning Experiences

## 1. Create artwork from doing a shadow drawing.

You can use anything from nature or just anything that will create a shadow.

## 2. Natural Art

Get inspired by Andy Goldsworthy and make some nature Art. It can be made from sticks, stones, leaf, sand. You can always stick them down onto paper or card to keep.

When you have finished take a photo.

Look at the file with his work to give you some inspiration.

## 3. Planting

Now is the time to get planting. Can you plant some seeds and watch them grow?

At this time of year most seeds are planted inside or in a greenhouse before being transferred into the garden. If you have a sunny window sill get planting.

You will need a container, some rocks to put in the bottom of the container to help with drainage, soil and seeds (can be vegetable or plants). If you don't have plant pots think about any food containers you could recycle to use. If you don't have any soil, on your one form of

exercise look out for mole hills and use some of the soil from that.

What will your plant need to help it grow?

You could make a diary recording how your plant grows

You can link this in with your science and create your own experiment.

#### **4.Spring watch**

You can do this in your garden or just look out the window.

What signs of spring can you see?

You can use the spotter sheet and the powerpoint to learn all about the signs of spring.

Can you make a spring journey stick?
